

**Technique:**

- Patient was treated with photons via IMRT, 6MV energy. Cone Beam CT was used for image guidance.

**Dose:**

- Simultaneous integrated boost was used, 70Gy (CTV1), 63Gy (CTV2) and 56Gy (CTV3), in 35 fractions each with concurrent cisplatin.

**Simulation:**

- Supine with a thermoplastic mask and a custom head pillow. 2mm thick slices were used in the CT simulation with IV contrast.
